

PPE Recycling Service FAQs

Q) What are the benefits of using a PPE Recycling Bin?

A) Alternatives are often open topped (bags, skips etc) and these cannot be left outside. Our lidded bins are weather proof, tidier, easily identified and take up less space on a busy construction site.

Q) Is there a rental charge for the bin?

A) No, you just purchase the bin from us. Then you arrange for the collection of the contents, which will take place at your site. A collection fee is paid for separately, and you keep your bin for the next collection.

Q) How is my PPE recycled?

A) The PPE recycling takes many forms. Where materials can be reclaimed, do not identify the company, and are in demand; they enter recycling streams where raw materials can be recovered and enter a system of circular economy. Where this is impossible, the PPE will enter a waste to energy process to provide power that further serves everyone.

Q) What can I place in the bin?

A) Any PPE you are looking to recycle may be placed in the bin. This includes RPE filters and soiled PPE. However, the cleaner the PPE, the greater the opportunity to recycle it.
