BIOLOGICAL URINAL BLOCKS INFORMATION SHEET

USE:

Water soluble cleaning and deodorising blocks for use in all urinals.

Strains of harmless bacterial cultures together with environmentally sympathetic chemical cleaners break down the organic waste and uric scale in urinal traps and pipes that cause odours, blockages and flooding. Use of Biological Urinal Blocks reduces flushes to typically 3-4 times a day. Proved to save up to 100,000 litres of water per urinal per year. Biological Urinal Blocks do not contain pDCB or other dangerous chemicals & are particularly suitable for use in schools, public buildings, hotels, pubs, clubs, institutions & restaurants etc.

DIRECTIONS:

Put one or two blocks in each urinal.

For troughs place 50cm apart.

Store in a cool, dry place.

Average contents 50 blocks.

TECHNICAL:

State:	Solid
Colour:	Green
Odour:	Lemon odour
Density:	1.53

PERSISTENCE AND DEGRADABILITY: Not biodegradable.
