

Summer Safety

Staying safe on construction sites this summer

2020/21

bolle
SAFETY

This summer, many people in UK construction will have to work in hot conditions, potentially putting their health and safety at risk. PPE is an important element of any hot weather working strategy, says OnSite Support's Damian Lynes.

While many people in the UK will welcome the chance to get out in the sun this summer, spare a thought for construction workers, many of whom will have to work outside in full PPE, regardless of the weather.

Heat stress is a very real problem. It can lead to heat exhaustion and, in the most severe cases, heat stroke, which can mean construction workers are unable to concentrate fully and can experience muscle cramps and fainting. Clearly, this can have an impact on people's wellbeing and safety on site.

Those working outside are also more at risk from skin cancer. Cancer Research UK reports that there are about 15,400 new cases of, and 2,400 deaths from, melanoma skin cancer each year. Additionally, the Institution of Occupational Safety and Health says there are almost 3,000 cases of non-melanoma skin cancer caused by exposure to UV radiation from the sun at work and around 250 cases of malignant melanoma.

Have a hot weather working strategy

With summer around the corner, it is therefore essential that employers ensure they have hot weather working strategies in place. These will include providing site workers with plenty of drinking water to prevent dehydration and building in regular breaks, where they can rest out of the sun and remove PPE in safety.

Choose suitable, comfortable PPE

Along with safety, comfort of PPE is paramount – if it is not comfortable, then people may not wear it. This means clothing has to be lightweight and breathable and must offer sufficient protection from the sun, with an Ultraviolet Protection Factor of 50 or more.

It is also worth considering choosing safety footwear with breathable linings, so workers' feet are cool and comfortable in the summer months. This does not mean investing in two sets of boots or shoes either - they keep feet warm when the temperature drops.

Hard hats can be a particular source of discomfort in hot weather; wearing one makes losing heat more of a challenge. In the hottest conditions, it is worth considering issuing helmet cooler systems to reduce heat. The Kalis system from manufacturer Centurion, for example, can cool the head to 15°C below ambient temperature, making it much easier for the wearer to regulate their body heat.

Protect eyes from damaging UV

The level of UV protection offered by protective eyewear is an important consideration during the summer months. Lenses meeting EN170 *Ultraviolet filters* give UVA and UVB protection and should also conform to EN172 *Specification for sun glare filters for industrial use*, meaning they offer protection up to UV780NM.

Additionally, protective eyewear sold in the EU and the UK must meet EN166:2001 *Personal eye protection - specifications*, which lays out the minimum resistance of frames and lenses against a number of risks, from dropping onto a hard surface, to impact from flying projectiles and ageing through exposure to heat, light and corrosive materials.

Educate workers on the dangers

Alongside PPE, it is important that hot weather working strategies include education of workers on the dangers of heat stress and too much sun: from staying hydrated; applying sunscreen before a shift and every two hours thereafter, to keeping tops on – particularly if they are wearing hi-vis clothing.

The summer months also bring more insects and with them, increased risks of bites and stings; it is a good idea to have a record of anyone who suffers from allergic reactions and to make the team aware of how to deal with an adverse reaction, such as using epi-pens, should anything happen.

In fact, the success of a hot weather working strategy is built on everyone on site looking out for one another, as well as themselves. This should keep everyone safe, coherent and happy, which will have a positive impact on any company's productivity.

We offer a range of PPE appropriate for hot weather, from breathable hi-vis clothing and footwear, to UV400-rated protective eyewear and hard hat cooling systems.

Our team will also be happy to help customers develop hot weather working strategies, providing independent advice on the best approaches and equipment. For more information or to book one of these services, please call us on 01293 744 444 or email hello@onsite-support.co.uk

|  Anti-mist lenses |  Sun spec |
|  Lightweight |  UV 400 rating |

Standards

EN170
Recommended during high UV radiation

EN166
Guaranteed minimum resistance of the protective eyewear against everyday risks including dropping the protective eyewear onto the ground, ageing by light exposure, exposure to heat or corrosion etc.

Frame marking

Frame marking must include the CE Symbol and manufacturer's name (logo or brand). If the glasses refer to the EN standard, the EN standard number is mandatory together with the various use and mechanical strength symbols, in accordance with the tests requested by the manufacturer.

Mechanical strength symbols:

- B.** Medium energy impact, resists a 6mm, 0.86g ball at 120m/s
- S.** Extra strong, resists a 22mm, 43g ball falling 1.3m
- T.** The letter T, immediately after the mechanical strength symbol, authorises use for high speed particles at extreme temperatures

Use symbols:

- 3.** Liquid droplets or splashes
- 4.** Large dust particles > 5 microns
- 5.** Gas and fine dust particles < 5 microns
- 9.** Molten metal and hot solids

Lens marking

Lens marking must include the scale number for filtering lenses and the manufacturer's name (logo or brand recommended by the manufacturer).

Mechanical strength symbols:

- B.** Medium energy impact, resists a 6mm, 0.86g ball at 120m/s
- T.** The letter T, immediately after the mechanical strength symbol, authorises use for high speed particles at extreme temperatures
- F.** Low energy impact, resists a 6mm, 0.86g ball at 45m/s
- S.** Extra strong, resists a 22 mm 43g ball falling 1.3m at 5.1m/s

Optical class symbols:

- 1.** Continuous work

Use symbols:

- 9.** Molten metal and hot solids

Others symbols:

- K.** Resistance to surface damage by fine particles (optional)
- N.** Resistance to fogging (optional)

UV and the effects on the eye

When protecting the eyes it is important to select the correct type of lens filter. Clear polycarbonate lenses offer protection at the lower (UV215 to 380NM) range, whilst a filter conforming to EN172 offers additional protection through to 780NM.

We offer an Eye Protection Audit.
See page 14 for more information.

Summer Eyewear

Bollé Viper Safety Glasses with Anti-Mist Anti-Scratch Lens

- Offers all-round vision and fits all face shapes thanks to its adjustable temples
- Upper protection
- Adjustable temples
- **EN166 F**

Colour:	Code:
Clear	SP2VIPPSI
Tinted	SP2VIPCF

Bollé Rush Safety Glasses with Anti-Mist Anti-Scratch Lens

- Offers perfect optical quality, maximum comfort and a modern design
- Adjustable non-slip bridge – designed to adapt to the nose so the frame sits perfectly on the face
- Technology approved for permanent wear and certified with perfect optical quality with anti-fog and antiscratch coatings
- 99.9% UVA/UVB protection
- Clear lens
- **EN166 F**

Code: **SP2RUSHPSI**

Bollé Silium Safety Glasses

- Modern anti-static, non-slip tipgrip temples
- Metal frame
- **EN166 F**
- Maximum protection for glasses.

Colour:	Code:

Safety standards

This standard specifies the bare minimum in conformance for visibility on site and has several classes within it ranging from 1 to 3. The higher the number, the more material is present on the garment. In certain circumstances, you will only be permitted class 3 garments, and be aware that the 20471 standard allows for 2 garments to be tested as a set (trousers and jacket for instance) to give a combined higher class compliance.

Required for active rail lines and when working for certain contractors on railway tracks. From March 2017, the RSSB replaced GO/RT3279 with this standard. In technical terms, nothing changed between the old and new standard and GO/RT garments remain valid. New products will be released to the RIS-3279-TOM standard.

Look out for  on items with rail compliance.

Covering chainsaw proof clothing exclusively, this standard should be sought if that level of protection is required. Note that usually only a part of the front of trousers and jacket will have protective material in it and it will be rated at a certain speed (meters per second). As a result, you need to know the speed of your chainsaw so that you can select the correct PPE.

Specifically for waterproof garments, the breathable aspect of EN343 has been much discussed in recent times. The ratings given are X:X, the first number (1-3) being waterproofness and the second number being breathability. 3 is the highest number so the ideal garment will be rated 3:3 but within that test there are a range of garments performing to various levels within EN343 and still claiming a classification of 3:3. If inclement weather is a real concern of yours, please talk to us as we have solutions which will help you be more comfortable, more effective and remain compliant.

Look out for  for compliant garments.

If there is a marginal risk of flame/fire then EN533 will give you limited flame spread properties within the garment. ISO14166 has replaced EN533. The spread index will range from 1 to 3 with 3 being the most resistant. These garments are designed to protect the wearer from brief contact with small flames and is not designed to be a garment protecting the wearer from heat.

If you are undertaking welding or allied processes, look for this standard. It's important not to simply have a heat proof garment since your contact with both heat and fire is a risk which this standard takes into account.

Should you need antistatic properties in your garments, this is the standard you're looking for. It is achieved by simply weaving a conductive thread through them – often carbon based – essentially creating a Faraday cage effect around the wearer.

This standard is for electrical workers to ensure they are protected from the thermal hazards of electric arc flashes, which for up to a second, can expose a person to temperatures up to 19,000°C.

If you're likely to suffer small splashes from liquid chemicals, this standard is likely all you need. Where total coverage is required, look out for EN 14605.

Bespoke clothing

Corporate Uniform Personalisation and Branding Services

We understand that today's corporate clothing needs to do more than just carry a name, it needs to reflect an image.

We can take an existing design and tweak it with your own combination of colours, sleeves, pockets, etc.

Embroidery: The method of choice for premium branding collars etc to really reflect your image. With low minimum

quantities and relatively short lead times, this scheme is ideal for minimum hassle with maximum impact. From one garment to thousands, we're experts in the many methods of garment marking, including:

- 1. Heat Seal Transfers** – Durable, sharp and clear with rapid turnaround
- 2. Screen Printing** – Excellent value, ideal for larger quantities

Fully Bespoke Workwear Branding Service

We can work with you to create a unique corporate image entirely from scratch. We will listen to your requirements, visit the working environments and gain an understanding of your brand values in order to get the look and feel just right.

Hi-Vis & Summer Clothing

Hi-Vis Coolviz Polo Shirt – Yellow

- Coolplus fabric technology originally designed for use in professional sports means this polo shirt keeps you cool in warm conditions, offering superb comfort and performance
- Quick drying: synthetic fibres retain minimum water
- Moisture wicking: transfers moisture away from the skin
- Easy to care for: resilient fabric resists creasing, washes easily
- Rib knit collar with three button placket
- Open hem cuffs
- Fabric: 100% polyester Coolplus®
- **EN20471 Class 2**

Sizes:
S – 4XL

Online ordering made simple

To support a fast and efficient delivery of safety, welfare and site equipment to your sites, our Support Hub is the service we provide when you sign up to an online account with us.

Our website allows simple navigation to find the products you need and offers a one-stop-shop to review all your orders, invoices and proof of delivery documents in one place.

Personal service

- Create a centralised portal to approve site requisitions
- View company specific and bespoke branded products
- Allows company to access agreed discounted price lists
- Add company favourite products to a specific account to promote certain products
- Access to personal documents such as bespoke brochures and order forms
- View your order history to identify trends in spending

Easy ordering

- Simple website navigation to find relevant products to purchase or place requisitions
- Review all your orders, requisitions and invoices in one place
- All Proof of Delivery links available for download, saving time for your finance team
- In addition to company favourites, add individual favourite products for quick, easy and repeat ordering
- Search and sort function on invoices allows easy access to invoices by date, cost and invoice number
- Add any extra details for delivery via our special instruction box

Full support

- Details of your dedicated account manager
- Our customer support team will check and verify your order
