Beating the Heat: Essential Safety Tips for Construction Workers in the warm weather

Know the signs of heat exhaustion and heatstroke

Symptoms of heat exhaustion include heavy sweating, weakness, dizziness, nausea, and headache. If left untreated, heat exhaustion can progress to heatstroke, which is a medical emergency. **Symptoms of heatstroke** include a high body temperature, confusion, seizures, and loss of consciousness. If you or a coworker experience any of these symptoms, seek medical attention immediately.

Working in construction during the warmer weather poses a number of risks to site workers, as high temperatures, humidity and direct sunlight can lead to heat exhaustion, dehydration and sunburn. It is important for workers to take extra precautions to protect themselves from these hazards. Warnings, such as safety signage, should be given to site workers, where high temperatures may be found. Further measures should be put in place to prevent the negative effects of warm weather working. Continue reading to find out how you can help your team stay safe and protected this summer.

Choosing Appropriate PPE

One of the most effective ways to stay safe in the summer is to wear appropriate personal protective equipment (PPE). When working outside in the heat, it is important to wear lightweight, breathable clothing that covers as much skin as possible.

When choosing your PPE, you should look for garments made from moisture wicking materials. These fabrics are designed to pull moisture away from the skin, keeping workers cool and dry. Some examples of wicking materials include synthetic fabrics, such as: polyester, nylon and spandex. These materials are lightweight, breathable and easy to move in.

- Moisture-wicking clothing does not absorb or retain moisture.
- Quick-drying garments move moisture to the surface and dry fast
- Breathable clothing allows air to flow through, preventing heat buildup and excessive sweating..

Protecting Your Skin

Sun exposure can present significant health risks to construction workers. Prolonged exposure to the sun's harmful ultraviolet (UV) rays can result in sunburn, skin cancer, and other skin damage. For individuals who spend extended periods outdoors, protecting their skin from the sun is crucial.

To prevent sun damage, it is vital to wear protective clothing like long-sleeved shirts, long trousers, and wide-brimmed hats. Additionally, using sunscreen with an SPF of 30 or higher on exposed skin is essential. Workers should aim to reapply sunscreen every two hours for optimal protection.

Staying Cool & Hydrated

Working on construction sites can be physically and mentally strenuous, especially during the summer. It's crucial to stay cool and hydrated to prevent heat exhaustion and heatstroke. Here are some tips to help you stay safe and comfortable:

Stay hydrated: Drink water regularly throughout the day, even if you're not thirsty. By the time you feel thirsty, you might already be dehydrated. Carry a water bottle and take regular breaks to refill it.

Take breaks in shaded areas: Opt for shaded spots during breaks to avoid direct sunlight. If shade is scarce, create your own using umbrellas or tarps.

Avoid caffeine and alcohol: These beverages can dehydrate your body, making it challenging to stay cool and hydrated. Stick to water, sports drinks, or other non-alcoholic and non-caffeinated options.
